Homeopathy cures hypo and hyperfunction of a pathological pathway according to the physical resonance principle

Lenger Karin

University of Tübingen, Germany

Karin Lenger detected magnetic photons in highly diluted and potentized homeopathic remedies. Since the living body is an electromagnetic wavepackage (Einstein), the homeopathic law of Similars (Hahnemann 1755-1843) can be expressed as: the frequencies of the patient must match the frequencies of the remedies. Homeopathy is a regulation therapy curing hypo and hyperfunction of a pathological pathway by resonance: highly potentized substrates, inhibitors, enzymes, receptors of the distinct pathological pathways cure according to biochemical rules: A homeopathic symptom picture is obtained by poisoning a volunteer with a toxin. Simultaneously he develops psychological symptoms, the toxicological pathway and e.g. frequencies I-V. The highly potentized toxin has the frequencies I-V. The patient has symptoms as if he was poisoned by the toxin: during his illness he developed the toxicological pathway, frequencies I-V and psychological symptoms. The potentized toxin cures simultaneously the patient's frequencies by resonance, his pathological pathway and the psychological symptoms. A stitch of honey bee, *apis mellifica*, causes a red oedema; a patient developing a red oedema at the finger-joint by rheumatism is cured by highly potentized *Apis mellifica*. Paralysis caused by a lack of the neurotransmitter acetylcholine bound to the acetylcholine-receptor at the post-synapsis can be healed by using these potentized remedies: the venom of cobra, *Naja tripudians* containing the receptor's irreversible inhibitor cobrotoxin, the reversible inhibitor Atropine and Acetylcholine, daily applied. The availability of acetylcholine is maintained by glycolysis and fatty acid oxidation. This can be supported by giving these remedies: Lecithin, Lipasum, Glycerinum, Glucosum and Coenzyme A.

Biography

Lenger Karin Dr.rer.nat., pursued Diploma in Biochem, studied Biochemistry at the Universities of Tübingen and Cologne. Her research topics revolved around enzymatic gene regulation, cancer research, enzymatic mechanisms of steroid hormones at the Medical University of Lubeck. In 1987 she became a Lecturer for Homeopathy at DHU ((Deutsche Homöopathie Union = German Homeopathy Union). Since 1995 she worked as a Homeopathic Practitioner and developed the "biochemical homeopathy" by using highly potentized substrates of pathological enzymes for her patients. She detected magnetic photons in high homeopathic potencies by two magnetic resonance methods and developed a model of physical and biochemical function of homeopathy.
