Easy and accurate conformation of early pregnancy during autopsy

Neelam Shrivastava¹, D K Satpati² and Rini Khare²

¹Medico Legal Institute, India

²Laxminarayan Medical College, India

One of the causes for suicide in young and unmarried females is illegal relationship which turns into pregnancy. To hide the shameful condition, female commits suicide and sometimes during autopsy, due to misdiagnosis of pregnancy parents have to face embarrassing condition. On the other hand if finding of pregnancy is not detected during autopsy and product of conception is not preserved for DNA test then accuse will be exempted from punishment. Therefore, an accurate test of pregnancy is essential. The proposed method is an easy and confirmatory test for the same which is done by examining urine for HCG (Human Chorionic Gonadotrophin) of deceased by HCG strip.
