Child is not a miniature adult

Nourah Abdul Kader
MGR Medical University, India

Pharmacological behavior management with the use of general anesthesia has become one of the popular techniques to manage children. But, the physiology of children differs from adults in various aspects and knowledge of these significant differences is a pre-requisite before considering management of children under general anesthesia. This paper emphasizes on the various physiological differences between children and adults and their clinical implications.

Biography

Nourah Abdul Kader has completed her degree in Bachelors of Dental Surgery at the age of 23 years from The Tamil Nadu Dr. MGR Medical University, Chennai, India. She has also completed a Basic Implantology course with the successful placement of single implant system.
