July 20-21, 2018 | Atlanta, USA

The power of the pulp in response to direct pulp capping

Kishan M Sheth

King's College, United Kingdom

The purpose of this presentation is to carefully analyze the findings to date regarding a potential link between periodontitis and carcinogenesis; evaluate, critically review and explore the variety of potential study confounders and study criteria differences which suppress the accuracy and validity of the relationship claims being made; gain an appreciation of the biological plausibility of mechanisms which could be underpinning the relationship between the two diseases; and finally to conclude whether the current level, findings and quality of research is accurate in supporting the existence of the periodontitis cancer link. I will assess the potential link between periodontitis and several cancerous tumor types, and analyze the evidence regarding the biological plausibility for the potential association between periodontitis and cancer. The strongest association is present between periodontitis and oral cancer since each of the three studies looked into show a statistical link between both diseases. The international burden of cancer has risen every year, a trend that has been paralleled by the increase in periodontitis cases. Research undertaken by GLOBOCAN (2012) states there were 7.6 million global cancer cases in 2008, and in 2012 there were 14.1 million global cancer cases, an increase of 84%. Although there is a lack of recent statistical data related to periodontitis cases, between the years 1997 and 2005, there was an increase of 27% of adults aged between 35 and 44 who had Periodontal pocket depths greater or equal to 4 millimeters (Dye, 2012).

Biography

Kishan has published in several internationally renowned dental magazines, as well as having recently been accepted into his first international peer reviewed journal, the 'Journal of Dental Health, Oral Disorders and Therapy'. He has presented work at 2 national conferences and also 2 international conferences in Sharjah and Dubai, UAE, and has also lectured alongside PhD level students in the past for the London Materials' Society on the topic of MI dentistry. He was recently asked to give interviews for the British Dental Journal and Dental Town. Kishan is also on the honorary editorial board for Dental Town UK. Over the past two years, he has been working on a publication with Mandeep Ghuman entitled "Periodontitis and Cancer: Is there a link?"
