Dentistry and Dental Materials

July 19-20, 2018 | Rome, Italy

Occlusal and aesthetic philosophies and approach in rehabilitating a dentate occlusion

Kubais Al Assaf

Professionell Tandvård i Uppsala, Sweden

A stable masticatory system and acceptable aesthetics are one of the biggest challenges during a full mouth rehabilitation. Each patient with severe worn dentition is unique, so to meet the requirement for a stable chewing system and to get the desired smile in severely worn dentition is a challenging for dental practitioner. There are different concepts, ideas and opinions about how to get an appropriate stable occlusal scheme as well as to meet the aesthetics goal. This presentation is an overview of different occlusal and aesthetic philosophies and multidisciplinary approaches in full mouth rehabilitating in dentate patients to guide dental practitioner to fill the requirements for stable occlusion and aesthetics.
