

23rd American World Dentistry Congress

November 02-03, 2018 | San Francisco, USA

Amr Abouzeid

Tanta Univiersity, Egypt

Digital smile design full protocol

Digital Smile Design is considered a hot topic in modern dentistry, seeking the perfection and the ideal results are now much easier to be done by this magnificent tool. In the workshop, we will have many topics to be discussed before the hands-on and software application. First, we will talk about the ideal smile parameters, Then the motivational mock-up and how to use it to communicate with your patients and convince them about your treatment plan. Also, we will discuss the classification of different cases and how to deal with them separately to produce the ideal smile. And Finally, we will apply all of this knowledge on a case, every participant on his own laptop, and start the digital designing using DSD template that you will receive it from me. N.B I can accept any number of participants on the lectures, However in the hands-on, it should not be over ten participants.

Biography

Amr Abouzeid has completed his BDS in 2014, he has attended many courses in DSD with the DSD concepts inventors Dr Christian Cochman, Mrl.
