

14<sup>th</sup> International Conference on

# Dental Health

September 14-16, 2016 Philadelphia, USA

**Giancarlo Pongione***Pongione Dental Clinic, Italy*

## TF adaptive and elements free

Shaping is a very important step of an endodontic treatment because unshaped canals cannot be cleaned, disinfected and filled. After the shaping, to achieve the success, it is mandatory to fill the root canal system with warm gutta-percha and then to restore as soon as possible the tooth to avoid contamination of the endodontic space. The purpose of the workshop is to show how to shape with TF Adaptive instruments and how to fill the root canal system with elements free. Participants will receive all the information about instruments and techniques and during the hands on they can try to shape a plastic block and then fill them using the continuous wave of warm gutta-percha.

## Biography

Giancarlo Pongione has completed his Doctor of Dental Medicine from University "Tor Vergata" Rome (Italy) and PhD in Biocompatibility of Dental Materials from University of Siena, Italy. He was past Visiting Professor at the University of Rome "La Sapienza". He is the author of over 90 publications on the theme of aesthetic restorations and endodontics and speaker at numerous national and international congresses.
