October 24-26, 2016 Rome, Italy

Dentistry research through EBSCO online resources

Gianluca Di Bella

Vice President Sales Latin Europe and Israel EBSCO Information Services

Medical researchers need quick and easy access to the best information available. That is where EBSCO Health can help. EBSCO Health is the leading provider of evidence-based clinical information, healthcare business intelligence, and peer-reviewed medical research tools for the global healthcare community. Content is in the formats that work best for users including medical e-books, medical databases, clinical decision support tools and medical journals. Technology solutions like EDS Discovery Health make it easy for users to access all content from one search box. This is the perfect solution. Users can easily access the medical information they need and purchasers benefit from greater efficiencies, lower cost and increased flexibility. Our goal is to meet the needs of users and maximize return on investment. With Dentistry & Oral Sciences Source, EBSCO Health offers an extensive collection of important full-text journals, many with no embargo. This unique database includes many active full-text sources not available in any other EBSCO databases. Covering top-ranked titles in this discipline, the database includes full-text, indexing and abstracting for hundreds of journals, books, monographs, magazines and trade periodicals, commonly purchased by dental schools and other well-respected institutions. It also offers searchable cited references, linking to the complete text of many of the original works. The database aims to support practitioners, researchers, and advanced dental education. From a statement from the Library Journal: "Advanced Search, with its elegantly laid-out tool set for crafting very precise search strategies, gives the user great control over the whole search process".

Biography

Gianluca Di Bella has been working in EBSCO since 2006. He has been Vice President Sales Latin Europe and Israel at EBSCO Information Services since 2010. He has been working for 20 years in the information industry for any institution, library or organization. He is in contact with the most important academic institutions all over Europe and he took part in some health conferences like EAHIL (The European Association for Health Information and Libraries), being EBSCO in the EAHIL network. He has negotiated with the most important biomedical consortia in Europe and he has a big experience in biomedical research databases.
