

The most predictable impression technique for full mouth implant supported prostheses: Review paper and case presentation

Nabiel alghazali

Different protocols have been used in practice to produce an accurate impression for full mouth implant supported prostheses. This including: Different impression materials; different impression technique; splinting or non-splinting of impression cops; different splinting materials and different splinting protocols. In this review paper, literature has been reviewed to finalize the ideal and most predictable impression technique to be used to give and accurate and well-fitting final prostheses in case of full mouth implant supported prostheses. A clinical case also was presented here to demonstrate a step by step protocol for this purpose.

Biography

Nabiel ahmad alghazali: Dr. Alghazali N is working as consultant prosthodontics at Riyadh, Saudi Arabia. He finished his diploma and PhD.
