# PROSTHODONTICS & RESTORATIVE DENTISTRY

April 16-17, 2018 | Las Vegas, USA

## Patient Satisfaction

**Nooshika**

University Paris Descartes, France

The foundation for successful treatment planning is largely reliant on the ability of the clinician to attain an accurate and contemporaneous patient history and to carry out a meticulous clinical examination. Treatment planning should aim to fulfill the patient's realistic expectations, provide an out-come that boasts functional and aesthetic success and where possible, utilize techniques that involve minimal intervention. Emphasis should be placed on actively listening to the patient's concerns and attitudes. Golden Proportion is a mathematical concept applied in architectural design and engineering to study design proportionality in the beauty of art and natures. Patient satisfaction can be achieved by different types of dental treatment plan such as, Tooth Whitening; Cosmetic Teeth Shaping: Also referred to as "enamel shaping," the dentist can reshape the tooth by filling or removing some of the enamel; Tooth Bonding: This is a procedure that can be used to repair or improve the appearance of a tooth that has been badly stained, broken or chipped; Dental Veneers: Veneers are a thin shell made out of porcelain or composite; crowns.
