Can we push the limits in orthodontics in all techniques?

Elie Kikano and **Rue Brezin**
France

Obviously we now arrive with all our conventional buccal fixed appliances to push the limits in complex cases such as surgical-orthodontic cases, ortho-prosthetic implant cases or even cases with severe crowding. However, is this therapeutic vision possible with new innovative technologies such as fixed lingual techniques or better techniques with aligners? Some clinical cases will illustrate these possibilities.

Biography

Elie KIKANO has completed his orthodontic speciality from the University of Paris Rene Descartes in 1989. He has a private practice in Paris since 1990. He is a member of the SFODF (the French Orthodontic Society), the AAO (American Association of Orthodontics), and the WFO (World federation of Orthodontics). He is expert to the first Court of Appeal of Paris. He has published papers in French orthodontics journals and has been a lecturer in many French orthodontic meetings such as French Orthodontic Society's annual session or international meetings such as the Dubai's Dental-Facial.
