A Complete Review Article of the Effectivity Of Using “CAPPED BRUSHES “ in Human Oral and Dental Hygiene Maintenance

Saanika Bali
PDM Dental College, India

Today, there are predominanalty two types of brush being sold, capped and Non Capped Brushes. Capped brushes are expected to prevent the brush from being a breeding ground for microorganism. This review provides a complete angled approach as to if they should be used or not. Recent studies show that caps provide effektivly no better protecion against microorganisms. In addition, i have down my own research in association with my professors on this topic.
