

6th Indian Dental Congress

November 23-25, 2015 Bengaluru, India

Drugs and dentition

Deeksha Kaura
INDIA

Some medications and drugs, both therapeutic or illegal, show adverse effects on the dentition of the individual. These can cause Xerostomia, periodontal problems like gingival enlargement, ulcerations and inflammation to name some.

Here we would discuss about these medications and drugs and their subsequent adverse effects on the dental tissues. We would also get to know the alternate treatment plans and the preventive measures to be taken by the patients

Biography

Deeksha Kaura has completed her Bachelors in Dental Surgery at the age of 23yrs from Maharishi Markendeshwar University. She was a student fellow under the Indian Council of Medical Research approved research at the Deptt of Preventive Pediatric Dentistry at MM College of Dental Sciences & Research, Mullana.
