

9th International Conference on

Dentistry and Dental Implants

May 09-10, 2016 New Orleans, USA

Difficult cases and their clinical solution

Walid Odeh

Academic Specialized Dental Center, Jordan

I believe that an orthodontist is not only a specialist dentist; he must have knowledge and interest in art as dentistry is not about teeth treatment but also to enhance the aesthetic value of the face to be a successful orthodontist because science has no end. In some clinical cases in our daily practice we might face bone deficiency to replace missing teeth with dental implants instead of doing second surgery and bone augmentation. We can be more conservative depending on orthodontic means such as extrusion of hopeless teeth, in other cases we can use mini implants to adjust complicated orthodontic cases and surgical cases such as skeletal openbite or interocclusal space deficiency. This lecture is for the Implantologist, Orthodontist & General practitioner. In this lecture I will talk about clinical cases to show the interrelation between ortho & implant solving clinical cases without surgery.

Biography

Walid Odeh has completed his BDS from Nisantas Ozal Yuksek Okulu, Marmara University, Turkey. Beside that he has a Master degree in Orthodontics from Baghdad University, 2000.
