Difficult cases and their clinical solution

Walid Odeh

German Association of Dental Implantology, Jordan

I believe that, an orthodontist is not only a specialist dentist; he must have knowledge and interest in art, as dentistry is not about teeth treatment but also aesthetic of the face. In some clinical cases, in our daily practice we might face bone deficiency to replace missing teeth with dental implants instead of doing second surgery and bone augmentation. We can be more conservative depending on orthodontic means such as; extrusion of hopeless teeth, in other cases, can be used in mini implants to adjust the complicated orthodontic cases and surgical cases such as skeletal open bite or interocclusal space deficiency. This lecture is for all the implantologists, orthodontists and general practitioners. In this lecture, I will talk about clinical cases to show the interrelation between ortho, implant, aesthetic dentistry and aesthetic medicine for solving clinical cases with no surgery. It's for specialist dentist and general practitioner. Cases in the lecture will cover: 1) Extrusion of hopeless anterior centrals to correct bone level before replacing them with dental implant instead of bone augmentation; 2) to gain more interocclusal space by intrusion of opposite posterior teeth; 3) to correct skeletal open bite by using mini implant instead of orthognathic surgery; 4) using mini implant to align tilted teeth to provide space for implant or bridge and 5) gum smile treatment by mini implant and Botox beside some cases about aesthetic dentistry.

Biography

Walid Odeh has completed his BDS from Nisantas Ozal Yuksek Okulu, Marmara University, Turkey. Beside that he has a Master's degree in Orthodontics from Baghdad University. He is a Fellow of ICCDE (International College of Dental Education). He is a member of: ICOI (International Congress of Oral Implantologist); AAID (American Academy of Implant Dentistry; Austrian, Turkish Jordanian and Egyptian Implant Association; European Esthetic Association; WFO (World Federation of Orthodontics); AOS (Arab Orthodontic Society); DGZI (German Implant Association); ADA (American Dental Association) and; AAAM (American Academy of Aesthetic Medicine). He is treating so many cases of TMJ disorder and gummy smile by Botox, besides participating in many international conferences as a Lecturer in many countries like USA, Germany, Jordan, Taiwan, Hong Kong and many Arab countries.
