## Deltopectoral fl ap for reconstruction of facial defects

Tahrir N Aldelaimi and Afrah A Khalil  
 University of Anbar, Iraq

The deltopectoral fl ap is beneficial for reconstruction of significant facial defects, offering up to 250 cm<sup>2</sup> of transferable cutaneous tissue to allow reconstruction of the entire facial defects. The deltopectoral fl ap tolerates folding very well and allows movement in wide directions. This clinical study was carried out at maxillofacial surgery department at Ramadi Teaching Hospital, Anbar province, Iraq. Acceptable functional as well as aesthetic achievements were obtained and confirmed that deltopectoral fl ap is good alternative surgical procedure can be applied for the reconstruction of head and neck.
