Creating natural aesthetic smile using all ceramic restorations

Nissaf Daoaui
Tunisia University, Tunisia

Aesthetic is a primary consideration for patients seeking prosthodontic treatment because the smile constitutes an important component in the presentation of a human being. A non harmonic smile decreases the beauty of the face and it can cause a discomfort in the social conviviality. To appear attractive, the maxillary anterior teeth must be in the proportion to facial morphology. So, Smile design should involve the evaluation of certain elements in specific sequence. To achieve an optimal aesthetic result, the dentist must be familiar with such characteristics such as tooth shape and gingival aesthetic characteristics. All ceramic restorations are very popular because of their optimal esthetic result.

Biography

Dr. Nissaf Daoaui is assistant professor, in the Department of fixed prosthodontics. She was graduated from Faculty of Dentistry –Tunisia in 2010. She also got the degree of Implantology (Nobel Biocare Implants). She has published more than 15 papers in reputed journals and has been serving as an editorial board member of journals.
