## People, Processes, and Technology – The three critical pillars of IoT-based device-driven care

**Sanjay Das**

*SD Global, Malaysia*

People, Processes, and Technology are the three critical pillars of healthcare digital transformation. While the buzz around connected healthcare in increasing, it must be noted that all these three pillars have to work in sync to derive maximum impact in terms of productivity enhancement and improved patient care. In this interactive session, Sanjay Das will talk about how healthcare companies and public health care can leverage the power of IoT by implementing device-driven care. With real-life examples, the attendees will learn how countries are leveraging IoT technologies like drones, zip lines, and mobile devices to enhance last mile health, optimize the delivery of health supplies, and also in chronic disease management.

### Biography

Sanjay has spent over two decades in the IT industry in Malaysia. He is passionate about how IT can transform the healthcare industry. At SD Global Technologies, with his great team of experts from healthcare backgrounds, he aims to help the Healthcare Institutes in Malaysia and South East Asia leverage technology to enhance patient care. Sanjay uses his vast experience in the healthcare industry and brings to the table a solid mix of strategy, innovative and integrated thinking, and technology expertise to help healthcare organizations devise a result-driven IT strategy.
