Transforming healthcare delivery in large enterprises through technological innovations

Kishore Dharanikota

Plural Hub LLC, USA

Healthcare delivery is more complex than ever, and the healthcare organizations are struggling to balance the delivery of high quality care at an optimal cost to maintain the profitability. These organizations have to aptly plan to overcome the external pressures from policy and regulatory changes, competition and growing consumerism, and yet uphold the internal goals of patient care. The prospects of technology usage in engineering processes have grown exponentially in the last 20 years, with the wave of IT capabilities brought in by the innovation. For an IT leader, who supports the clinical or administrative solutions, a deep understanding of technology trends, and the application of integration, interoperability and analytics play a critical role. They need to catch the waves of innovation and apply them to the organizational IT transformation, where the current processes are supported by legacy solutions with high total cost of ownership. This presentation caters to technology leaders who either commit changes incrementally or take a “big bang” approach to transformation.

Biography

Kishore Dharanikota has more than 18 years of success in client-centric, service-driven environments at various progressive management roles. He is a resourceful Technical Leader and Solution-Driven Strategist with a passion for leveraging emerging technologies to achieve key healthcare business objectives. He is experienced in leading complex solution delivery engagements for multiple innovative companies across various sectors including Healthcare, Logistics, Financial and Automobile. He takes a special pride in optimizing healthcare processes through technology innovation to improve quality at a decreased cost. He is the Founder and Principal Consultant of Plural Hub LLC. Having years of experience in healthcare and other sectors, he is uniquely positioned to work on complex enterprise level technology solutions and provides advisory services through deep process experience. He co-authored a book on IT Systems integration, “BizTalk 2013 Recipes: A Problem Solution Approach” published through Apress publications.
