9th International Conference on
Predictive, Preventive & Personalized Medicine & Molecular Diagnostics
&
3rd International Conference on **Integrative Medicine & Alternative treatments**

October 26-27, 2018 | Boston, USA

Personalized and precision medicine as a model of healthcare of the newest generation towards translational applications to move ahead as a global International team

Sergey Suchkov[1-7], Jeff Skolnick[10], Mariya Studneva[1,6], William Thilly[11], Noel Rose[2] and Paul Barach[9]
[1]Sechenov University, Russia
[2]Moscow Engineering Physical Institute, Russia
[3]AI Evdokimov Moscow State Medical and Dental University, Russia
[4] International Standard for Phytosanitary Measures, Japan
[5]PMC, USA
[6]EPMA, EU
[7]American Heart Association, USA
[8]John Hopkins Medical Institutions and Harvard Medical School, USA
[9]Wayne State University School of Medicine, USA
[10]Georgia Institute of Technology, USA
[11]Massachusetts Institute of Technology, USA

A new systems approach to diseased states and wellness result in a new branch in the healthcare services, namely, Personalized Medicine (PM). To achieve the implementation of PM concept into the daily practice including clinical cardiology, it is necessary to create a fundamentally new strategy based upon the subclinical recognition of bio indicators (bio-predictors and biomarkers) of hidden abnormalities long before the disease clinically manifests itself. Each decision-maker values the impact of their decision to use PM on their own budget and well-being, which may not necessarily be optimal for society as a whole. It would be extremely useful to integrate data harvesting from different databanks for applications such as prediction and personalization of further treatment to thus provide more tailored measures for the patients and persons-at-risk resulting in improved outcomes whilst securing the healthy state and wellness, reduced adverse events and more cost-effective use of healthcare resources. One of the most advanced areas in cardiology is atherosclerosis, cardiovascular and coronary disorders as well as in myocarditis. A lack of medical guidelines has been identified by the majority of responders as the predominant barrier for adoption, indicating a need for the development of best practices and guidelines to support the implementation of PM into the daily practice of cardiologists. Implementation of Personalized Medicine requires a lot before current model "physician-patient" could be gradually displaced by a new model "medical advisor-healthy person-at-risk". This is the reason for developing global scientific, clinical, social and educational projects in the area of PM to elicit the content of the new branch.

Biography

Sergey Suchkov was born in the City of Astrakhan, Russia, in a dynasty of medical doctors, graduated from Astra-khan State Medical University and was awarded MD. Then he maintained his PhD and Doctor's Degree. And later was working for Helmholtz Eye Research Institute and Moscow Regional Clinical Research Institute (MONIKI). He was a Secretary-in-Chief of the Editorial Board, Biomedical Science, an international journal published jointly by the USSR Academy of Sciences and the Royal Society of Chemistry, UK. At present, he is (i) a Director, Center for Personalized Medicine, Sechenov University, (ii) Chair, Dept for Translational Medicine, Moscow Engineering Physical University (MAPhI) and (iii) Secretary-General, United Cultural Convention (UCC), Cambridge, UK. A Member of the: New York Academy of Sciences, American Chemical Society (ACS), American Heart Association (AHA), AMEE, Dundee, UK; EPMA, Brussels, EU; PMC, Washington, DC, USA and ISPM, Tokyo, Japan.
