

9th International Conference on
Predictive, Preventive & Personalized Medicine & Molecular Diagnostics
&
3rd International Conference on **Integrative Medicine & Alternative treatments**
October 26-27, 2018 | Boston, USA

The cancer revolution

Leigh Erin Connealy
Center for New Medicine, USA

Statement of the Problem: In this presentation, Dr Connealy will review a cancer diagnosis & case history as it relates to the latest in pre-screening testing and tests once you are diagnosed, including what to consume (the benefits of a modified Ketogenic Diet) along with various IV protocols and detoxification. She will review all aspects that touch upon Integrative Functional Medicine Therapies as they relate to Cancer. She will focus on treating the whole patient to look for the root cause of their cancer, including genetic, physiological, environmental, nutritional, social, emotional and spiritual factors. She will go into the fact that chemotherapy and radiation have their place in treatment, but in many cases, they are simply not enough, because cancer isn't caused by one thing, but by many different factors. Dr Connealy will review the latest techniques in cancer screening and technologies. The critical path begins with the practitioner directing the proper screening and tests before beginning treatment. She will review SOT (Supportive Oligonucleotide Technique) which is a treatment that can both detect and prevent cancer in the early stages of progression. She will discuss a cancer treatment that protects a normal healthy cell, boosts the immune system, blocking the angiogenic process that supports cancer growth and minimizes cancer-induced cachexia. She will review and educate on her modified Ketogenic Diet and examples on how that has benefited her patients..
