Revisiting Nobel Prize winner Otto Warburg and the prime cause of cancer

Stephen "Nos Biggs" Gibson
Try Naturopathy, USA

In 1966, Otto Warburg addressed the Nobel Laureates offering a novel but compelling argument that detailed his theory on the prime cause of cancer. We will challenge our audience to consider a reexamination of Warburg's thesis in light of recent NIH research. We ask also that Dr James Beard's work from the beginning of the 20th Century be examined in a manner that is consistent with Warburg's thesis. Finally, we will offer our experience with a Dow chemist, Jim Sheridan, whose work has gone essentially overlooked by today's modern science although he was a member of that fraternity for many years. Is it possible that some among us know the prime cause of cancer and how "cancer cells" are awakened and can be successfully suppressed then eliminated? Is there a bridge to modern science able to connect the walls of Big Pharma and the costs of double-blind research seeking a validation of what will only be presented as a well-reasoned theory of cancer elimination? Will there be those among my audience willing to offer this theory to clients as the information they should consider prior to cancer visiting their families? I will posit that once informed of anecdotal successes we can offer, many would choose the path I offer my clients. I am not allowed by law to diagnose or treat cancer. I am limited to coaching and counseling to alternatives once a diagnosis from an MD is obtained. Even then I cannot counsel to avoid the traditional "cut and burn" path that is offered to them. So, for now, I will teach while healthy, sharing my "knowledge" of a cancer cause, its organization and a method to eliminate cancer from one's body. This presentation will challenge us to build those bridges to Modern Science and save lives.
