Premature wear: the hidden causes

The purpose of this presentation is to open our eyes to one of the hidden origins of premature aging. More and more patients complain of this situation and at a younger and younger age. today more tooth structure is lost to wear than to decay and dentists are insufficiently trained to see, recognize, diagnose and treat the problems at the source. through patient modelisation and numerous cases Dr Aubé takes the attendees on a discovery voyage to guide them to seeing mouths with a new set of eyes. attendees will leave the lecture with a better understanding of how the system functions and why it degrades so much, so often and so young.

Biography

Dr Alain Aubé graduated from the University of Montreal Dental Faculty in 1984. He immediately after underwent a tailored multi disciplinary residency program, with special emphasis on fullmouth prosthodontics and orthognathic surgery. After a few years of private practice he continued with the full curriculum at the Dawson Center. From there he was introduced to Dr Mark Piper and followed his complete program on TMJ pathology.
