The use of vitamins in cancer patients is good or not good for them?**Huang Wei Ling***Medical Acupuncture and Pain Management Clinic, Brazil*

Introduction: The use of vitamins supplementations is globally used among cancer patients. According to some studies, all patients with cancer have energy deficiency and formation of internal Fire. The purpose of this study is to demonstrate that vitamins are considered highly concentrated medications that can harm even more the internal energy of all patients with cancer and the use of these supplementations can increase the chance to have metastasis or worse the laboratory exams of these patients in relation to cancer control.

Methods: a case report of 75-year-old male patient with history of prostate cancer surgery five years ago. At that time, he was having normal PSA level.

Results: after began vitamins supplementation, the PSA level increased to 25 mg/dl. This PSA elevation was reduced after taking out the vitamins and submitted to acupuncture sessions and highly diluted medications supplementations. The conclusion of this study is that, vitamins can harm the internal energy of cancer patients and can increase the chance to have metastasis or uncontrolled cancer caused by the reduction of internal energy, that is altered in all patients with cancer prior to this supplementation, according to traditional Chinese medicine.

Biography
