A panel of speakers will be delivering their presentations on their recent research related to it. The current state of knowledge, its impact on the future will be discussed in detail. Longdom invites all experts to be part of this webinar series and make it a perfect platform for knowledge sharing and networking.

Webinar cordially invites Researchers, Oncologists, Radiologists; Healthcare Professionals from all over the globe to be present at the webinar and it is going to be an extraordinary event which will focus on the recent medical developments in the fields of Oncology and Radiation based on the theme "New Challenges and Explore the Prevention of Oncology".

### Types of Oncology

- Radiation Oncology is one of the three basic specialties, the other two being surgical and therapeutic oncology, related to the treatment of development. Radiation can be given as a therapeutic system, either alone or in the mix with surgery or possibly chemotherapy. The mission of advances in radiation oncology is to give unique clinical research went for improving the lives of people living with tumour and distinctive ailments treated with radiation treatment. It is a medical specialty that involves treating cancer with radiation. Doctors who specialize in treating cancer with radiation (radiation oncologists) use

radiation therapy to treat a wide variety of cancers. Radiation therapy uses carefully targeted and regulated doses of high-energy radiation to kill cancer cells.

- Pediatric Oncology is a specialty discipline in medicine concerned with diagnosing and treating children, usually up to the age of 18, with cancer. It is thought to be one of the most challenging of specialties because, despite successful treatment of many children, there is a high mortality rate still associated with various types of Cancer.
- Gynaecologic Oncology is the study about any cancer that begins in a woman's reproductive organs. The five gynaecologic cancer starts in the woman's pelvis at different places. Each cancer is unique by its symptoms, signs, risk factors and in their strategies of prevention. All these five different types of gynaecologic cancers risk increases with the age. When these cancers were diagnosed at their early stages, the treatment will be more efficient. The five major types of cancer affect a woman's reproductive organs are ovarian, uterine, cervical, vulvar, and vaginal. All these as a group are known as gynaecologic cancer.
- Eye Cancer can disturb all portions of the eye, and can be a malignant tumour or a malign tumour. Perceptiveness tumours can be main and metastatic cancer. The two furthestmost mutual cancers that spread to the eye from another organ are breast cancer and lung cancer. Other less common sites of origin include the prostate, kidney, thyroid, skin, colon and blood or bone marrow.
