

Conference Proceedings: “5th International Conference on Biochemistry and Molecular Biology”

Rebecca Williams^{*}

Managing Editor, Journal of Membrane Science and Technology, Spain

ABOUT THE CONFERENCE

The conference is about the application of chemistry to the study of biological processes at the cellular and molecular level. The conference comprises of keynote presentations, verbal speeches, poster presentations and exhibitions providing the insight of biochemistry and its application and importance and Molecular Biology fields. The main theme of the conference is “Explore the Biochemistry and related fields”. The date of conference is 26-27 July 2021.

Biochemistry is that the application of chemistry to the study of biological processes at the cellular and molecular level. It uses the methods of chemistry, physics, biology and immunology to review the structure and behaviour of the complex molecules found in biological material and therefore the ways these molecules interact to make cells, tissues and whole organisms. It underlies and includes such exciting new fields as genetics and bioengineering. Biochemistry is additionally unique in providing teaching and

research in both protein structure/function and gene-splicing. Biochemistry also includes many subspecialties like neurochemistry, bioorganic chemistry, clinical biochemistry, physical biochemistry, genetics, biochemical pharmacology and immunochemistry.

Why to attend?

Biochemistry and molecular Biology conference focuses on creating an international platform for the participants to share their knowledge and research work on the respective fields. It will include various tracks and sub-tracks within the biochemistry and molecular biology field, which will further allow the participants to choose their respective tracks of their interests. The conference will give an opportunity to explore the topic with highly qualified researchers, scientists, doctors, professors and related people and associations who are involved in this field. It will be a great opportunity for the young researchers as well to learn and explore about their respective fields in Biochemistry and Molecular Biology.
