

Effect multi-disciplinary approach in cosmetic and esthetic dentistry-How important is the orthodontist??

Arjun Nayak

Nayaks dental clinic and specialty orthodontist center, India

Abstract

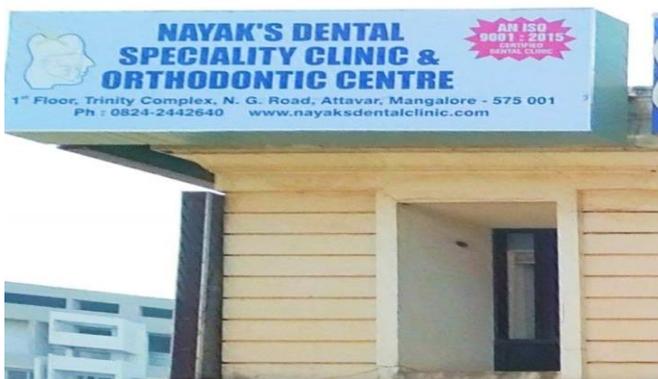

Orthodontics sets up the foundation for future prosthetics in cases with periodontal, surgical restorative and COSMETIC dentistry requirements. Adult orthodontics simplifies complex clinical situations Making it easier for COSMETIC dentists to achieve better esthetic & functional results. Orthodontics helps correct discrepancies in order to have the patient ready for Cosmetic and restorative treatment. Cases combined with implants to restore form & function will further illustrate the importance of multidisciplinary dentistry. Today's practice requires a team approach in order to meet the patient's demands for better esthetics and to obtain long term occlusal stability of our results. ORTHODONTICS combined with COSMETIC DENTISTRY produces an end result that guarantees long term periodontal health and produces patient's satisfaction with his or her dentofacial esthetics.
