Why open access is important for medical and pharmaceutical sciences

Open access will play an important role within growth of knowledge since open access mainly leads to develop and activate sharing and sharing is the main key which leads to growth of knowledge [1]. Its main importance for medical and pharmaceutical sciences is that it will support and encourage the doctors, pharmacists and others who work in the medical field for research to increase their medical information and experience by exchanging it with their colleagues who are working in the same medical field.

What is OMICS group role in supporting open access

The main role for OMICS group is by developing facilities within open access by making it free and easy for use for all workers in different fields. The main way for doing that is by retention of the authors with their ownership of the copyright for their article and by giving the right for those authors to allow anyone to be cognizant on their work and get benefit from it [2].

So How OMICS group will support the medical and pharmaceutical sciences

The main way that OMICS group will follow it to support these two

sciences by enabling the distribution of articles which are focusing on these two sciences to the whole global community [2]. This will mainly happen through the use of open access journal.

Conclusion

The main conclusion is that open access journal is a new way for exchanging knowledge and it really proves that it is an efficient way for growth of knowledge especially for knowledge related with the medical field. Since our health is the most important thing that we ever own, OMICS group considers as a very supporting group for such new knowledge exchange way i.e., open access journal.
