

New Carzin XL offers a slower onset for controlled flow

Pharma Dynamics yet again introduces a first to market generic with the launch of Carzin XL, the new extended release doxazosin.

Carzin XL offers:

- A slower onset of action vs immediate release formulations to allow fewer titration steps and to minimize side-effects*.
- Effective vasodilation to treat hypertension and BPH.
- Proven bioequivalence to the originator.

At an SEP (incl VAT) of R98,48, Carzin XL saves your patient up to 50% vs the innovator extended release formulation.

Recommend Carzin XL for a slower onset to ensure controlled flow.

For further information please contact Mariska Fouché, at Pharma Dynamics on (021) 7016080

S3 Carzin XL. Each film coated tablet contains 4 mg doxazosin. Reg No. 41/7.1/0557

Pharma Dynamics Clopidogrel 75 mg – affordable prevention

Pharma Dynamics announces a cost saving of up to 39%* vs the market leader generic with the launch of Pharma Dynamics Clopidogrel 75 mg.

Although clopidogrel has very strong data supporting the reduction of cardiovascular events*, many patients could often not afford this life saving drug for the full recommended treatment period in the past. Studies showed that prevention is better than cure in these patients*, and Pharma Dynamics Clopidogrel 75 mg therefore offers affordable prevention of atherosclerotic events.

Pharma Dynamics Clopidogrel 75 mg has been proven bioequivalent to the innovator and is available at an SEP (incl VAT) of R136.66.

For further information please contact Mariska Fouché, at Pharma Dynamics on (021) 7016080
