

## Robot and Stem Trainer

Anas Jaradat

KATATEEB, Jordan

### Abstract

Training Jordanian teachers and students on the Science, Technology, Engineering and Math Program (STEM) and writing curriculums in Arabic language for STEM, which is considered a revolution in the Arab world and training students and prepare them for national and international contests in robotics. Conduct assessment for gifted students to assess their needs, explore their talents, and provide appropriate action, such as providing training courses or sign him in national contests and supervise and provide mentoring and training for the gifted students through the national contests and push them to advance to international contests. I participate in organizing national and regional robotics contests as well as judging in those contests such as First Lego League and the Open Arab Robotics Championship and F1 in schools, which is building Formula 1 cars by 3D printing.

### Biography
