### DESCRIPTION

Social welfare program, any of a variety of governmental programs designed to cover citizens from the profitable risks and precariousness of life. The most common types of programs give benefits to the senior or sheltered, the sick or invalid, dependent survivors, maters, the jobless, the work- injured, and families. Methods of backing and administration and the compass of content and benefits vary extensively among countries. The implications in the idea of social welfare recipients are in some scene department organization potentially arguments for institutional welfare and normalizing need can be seen is an attempt to gain for social welfare.

Old-age, invalidity, and survivor programs, these give benefits to those who live beyond their capability or eligibility to engage in economic employment, to those who come permanently impaired other than through work injuries and who aren't covered under some other medical disability program, and to those who are left dependent by a departed worker. Programs of this type generally give for universal content; they're generally funded as contributory insurance programs. Time lock provisions apply to old- age benefits and, less stringently, to invalidity and survivor benefits. Benefits situations are generally 30 to 60 percent of base stipend. The plans are administered nationally.

These are the most complex and controversial of weal and security programs. Benefits may include remuneration for lost stipend in addition to medical treatment. Coverage ranges from universal down to only those employed by sharing employers. Backing may be contributory or governmental, depending in particular upon the system of furnishing service in a given country.

With varying degrees of public involvement in the actual provision of health care come degrees of choice by the case, of permanence in case physician relations, of incitement to hold down costs, of chronicity in physicians inflows, and of ease of administration.

These are benefits handed by governments to families with a specified minimal number of children. The benefits may be open to all families, in which case the program is a step in the direction of a guaranteed family income, or they may be handed as supplements to other backing, especially severance benefits. The 'social' element of social welfare is inversely a term of art. It may mean services that address a socially honored need, similar as sickness or severance, or that there's collaborative provision made by government agencies or public services.

A measure of social welfare immaculately includes not only the consumption benefits and physical birth costs of the resource but also non-use benefits and environmental damage costs. This is the oldest and most wide social weal program. Similar programs generally cover all workers of enterprises above a specified size and are financed by employer benefactions to some form of insurance plan. Benefits include medical payments, pay check restoration (generally from 50 to 75 percent of factual pay check), special recompenses for endless fleshly injury, and death benefits.

This is a residual program designed to give backing to various classes of indigent persons not covered by other programs. Typical classes of heirs include the aged not covered by the employment related programs mentioned over, the blind, the disabled not covered by work injury or other employment-related programs, and impoverished families with dependent children.
